

Dataset Discovery Through GeoMapApp

Justin Coplan

- Explore datasets hosted on the World Data Center(**WDC**) and the Publishing Network for Geoscientific and Environmental Data(**PANGAEA**) through a new GeoMapApp interface
- Datasets can be discovered through selecting a category (Boreholes, Corals, Pollen, Paleo Oceanography, ect...) browsing the geographic location of datasets subsequently drawn in GeoMapApp
- GeoMapApp directs the user's browser to the selected dataset hosted on **WDC** or **PANGAEA**

GeoMapApp providing an interface to pollen datasets served through NOAA's National Climate Data Center.
